

PRESS RELEASE

Zinwave appoints new President and CEO

Zinwave demonstrates its commitment to rapid growth in the wireless in-building market with the appointment of a senior industry expert

Cambridge, UK, 20th February 2012 – Zinwave, the leading provider in Active Wideband DAS (Distributed Antenna System), for in-building cellular and wireless coverage, has announced that Ian Sugarbroad has been appointed as President and Chief Executive. The appointment of Sugarbroad brings substantial experience in the Distributed Antenna Systems and wider telecommunications markets, and adds to Zinwave's credibility as a serious global vendor.

With over 30 years of experience gained within various telecommunications companies, Sugarbroad has been appointed to build on Zinwave's initial successes and accelerate growth. As President and CEO of LGC Wireless Inc. Sugarbroad was responsible for leading that company through to a very successful acquisition by ADC in 2007. Previous to that Sugarbroad served as President and COO of interWAVE Communications Int'l Ltd., and from this role led the Company through their successful NASDAQ IPO. Earlier in his career, Sugarbroad spent 23 years at Nortel Networks, playing key executive roles in a number of business units, including 10 years in the Wireless Group, where he was Vice-President of Business Development.

Following his appointment, Ian Sugarbroad said "The rapid rate of change witnessed in the cellular industry to date is only set to increase in the coming 5 years. Spectrum regulators are responding to user demand for ever increasing mobile data rates by releasing new spectrum. It is clear that with multiple cellular operators, each having 3 to 5 bands, along with WiFi and public safety coverage requirements it is becoming impossible to manage in-building deployments by taking the traditional narrowband service specific approach. Zinwave's wideband system is the only solution that can support not only all the bands in use today, but also those that will be in use tomorrow, without the need for costly upgrade".

Dr. John Forrest, Chairman of Zinwave, commented, "Zinwave entered the in-building Active Wideband DAS market as the only vendor offering a truly future-proof solution for the provision of wireless services in buildings. Our system is deployed and proven in a large number of projects around the world across all sorts of building types, from hydro-power stations, through yachts, sports stadia, hospitals, airports, shopping malls, etc. The

appointment of Ian Sugarbroad as President and CEO will bring a wealth of relevant experience in the in-building wireless industry to our dynamic growing Company, and will provide strong leadership and direction as Zinwave accelerates growth in its chosen markets.”

About Zinwave

Zinwave is a global technology company with offices in UK, USA and Asia that has pioneered a new approach for reliable multi-service in-building wireless coverage. Zinwave’s solution, the Zinwave 3000 wideband active DAS is the only True wideband active Distributed Antenna System (DAS) on the market, covering all frequencies between 150MHz and 2700MHz. Zinwave 3000 provides a highly cost effective multi-service, multi-carrier solution over a single hardware infrastructure that can be quickly and efficiently deployed and easily scaled for future service additions.

Zinwave has a highly experienced RF planning, program management and execution team with extensive experience in all parts of the wireless industry and international telecoms markets.

Sales activity is global with a strong presence across four continents and with relationships established with major well known partners and system integrators. Zinwave’s installation base includes customers in the Healthcare, Industrial, Public Venue, Enterprise & Corporate and Education vertical markets.
