CUSTOMER DEMAND DRIVES GLOBAL EXPANSION

In-Building Pioneers Strengthen 2007 Strategy With New Locations And Overseas Growth

3GSM, Barcelona, 12-15 February 2007 – Zinwave Ltd, pioneers of next generation in-building cellular and wireless technologies, today reveals it has expanded its headquarters facility in Cambridge, UK, and established new locations in Reading, UK, and Connecticut, USA. This follows an 8-month period of operator and customer trials, and will support Zinwave's aim to further penetrate the global market, using 3GSM as a springboard to establish relationships with complementary vendors and end-users.

Mike Baker, President and CEO of Zinwave, explains, "Since launching in March 2006, we've experienced significant levels of interest for our patented in-building wireless technology, resulting in a series of successful trials and the expansion of facilities in the US and UK to support our customers.

"As a relative newcomer to the in-building marketplace, we're delighted to be at 3GSM this year demonstrating our capability and to generate further interest within the market. It's an ideal environment for us to meet operators, and instigate relations with end-user organisations and potential partners.

"At this year's show we are pleased to be previewing the next evolution of our in-building product range, which again demonstrates Zinwave's ability to deliver wideband Distributed Antenna Systems based upon either Multi Mode or Single Mode fibre optic infrastructure. Our ability to use Multi Mode fibre in a wideband mode is certainly capturing the imagination of the market."

Martin Cassidy, SVP Sales, Marketing & Business Development, agrees 3GSM will provide opportunities to target mobile operators: "Issues such as business continuity and mobility are increasingly significant drivers in the enterprise, and as more and more applications migrate onto mobile devices, cellular coverage becomes a mission-critical service. In this environment, operators are under ever-greater pressure to deliver a seamless user experience, and retain those revenues gained from enterprise mobility strategies.

"By opening new offices and establishing customer support teams in various continents Zinwave is demonstrating its commitment to put in place the facilities expected by customers, enabling them to buy with confidence."

About Zinwave

Zinwave is a company at the forefront of wireless technology development, pioneering a new approach to in-building unified wireless infrastructure. With unique patented technologies drawn from world-leading research groups at Cambridge University and University College London, Zinwave was founded in 2002 and is today operated by a seasoned management team with extensive experience of international telecoms markets. The company develops Wideband Distributed Antenna Systems based on Multi-Mode or Single Mode Fibre-optic cables that address the challenges of providing continuous radio coverage inside buildings.
