

About the Deployment

Comprehensive Carrier Coverage

Zinwave's in-building wireless DAS solution was chosen to support multiple frequencies and a commercial cellular neutral host system. The solution immediately delivered LTE service for AT&T and Verizon in 2020, and is ready to deliver T-Mobile LTE in 2021.

World-Class Turn-key Deployment

Remote Units were placed throughout the terminal to achieve comprehensive cellular coverage of the space, and were linked back to the head end via single-mode fiber. Zinwave recommended adding additional strands of fiber to minimize installation costs when adding 5G in the future.

Agile Capabilities for Future Upgrades

Zinwave worked closely with wireless carriers throughout the project, selecting commonly used cellular frequencies to support the coverage and capacity needs of the terminal. NCL agreed to install additional strands of fiber throughout the site to decrease installation costs when 5G is deployed.

Trusted by the World's Top Brands

Zinwave deployed the project full turn-key: RF design, materials procurement, installation, and commissioning.
